ACCOUNTING AND REPORTING CHANGES

In 1983, the Interstate Commerce Commission (ICC) instituted a major change in railroad accounting methods, and along with structural changes in the consist of railroads that ocurred during that year, the comparability of annual statistics (particularly financial data) has been affected. The following is an explanation of the change in accounting, its effect on this report, and differences in railroad reporting that also affect this report.

Depreciation Accounting (DA)

Beginning with 1983 annual reports and 1984 quarterly reports, the railroad industry began reporting its financial results to the ICC based on a different method of accounting for track structure. Although cash flow is not directly affected by this accounting change, reported income and investment for the industry as a whole are higher than would otherwise have been the case; the impact on individual railroads will differ.

Prior to 1983, railroads used the RRB (retirement, replacement, betterment) method to account for the consumption of their track structure (rail, ties, ballast, and other track material). Under RRB, when a track structure was originally installed, it was capitalized but never depreciated. All subsequent repairs and replacement in kind were treated as maintenance expense; only improvements (betterments) of the track were capitalized and again, not depreciated. The original cost, less salvage value, was charged to expense only when the track structure was retired, such as in an abandonment or major realignment of the track.

Under ICC orders to change to the depreciation method of accounting (traditionally used to account for non-track assets), railroads now depreciate track assets over the estimated service life of each of the components. To implement this change, the value of track assets had to be restated to the amount it would have been if the railroads had always used depreciation accounting. This was accomplished by recording the value of the last programmed replacement of track structures, reduced by a depreciation reserve for the expired portion of the assets' useful service lives.

As a result of inflation, net income, investment, and related accounts are affected by the accounting change. First, since the cost of installing a new section of track has increased significantly over the amount at which most track was first installed, the restated value for the track account, net of depreciation reserve has increased. In essence, the accumulated depreciation expense has not offset the far greater replacement cost. Second, the depreciation expense in any one year is less than what would have been recognized as maintenance expense under RRB, so that income increases. Under depreciation accounting in an inflationary environment, the depreciation expense recognized for lower-cost prior year replacements is less that the current years replacement cost recognized as maintenace under RRB.

Related income statement and balance sheet accounts will be affected as well. On the income statement, in addition to the increase in depreciation expense and the decrease in maintenance expenses, interest expense and deferred tax expense will be affected. On the balance sheet, the increase in net road assets will be balanced by increases to accumulated deferred taxes and shareholders equity. Finally, capital expenditures for road will increase.

Effect on the "*Analysis*"

With the exception of the railroads on the next page (see Boston and Maine and Delaware and Hudson), data presented in the 1983 Analysis is on the depreciation method of accounting for track structure. This accounting change affects the direct comparability of financial data to previous years' figures.

The effect of the change from RRB to DA can be analyzed for 1983 using the insert provided in the front section. It is a summary of each railroad's 1983 results for the major income statement accounts on both an RRB and DA basis. Average net investment is also included. It must be noted however, that the effect of this accounting change is dependent primarily on the level of track maintenance occurring during the year and that future as well as previous years' comparisons may differ significantly.

Within the *Analysis*, two lines were changed. First, in previous years' reports, Line 119 was "Retirements of Non-Depreciable Property." It has been eliminated since track is now depreciated. Second, in this year's report, Line 117, Rate of Return on RRB Basis," has been added. As a result, Net Income Before Extraordinary Items," previously Line 118, is now Line 119. No other line numbers have been changed.

Reporting Differences

1. Boston and Maine (B&M): On June 30, 1983, B&M was reorganized under the Bankruptcy Act and concurrently came under the control of Guilford Transportation Industries, Inc. As a result, B&M filed two R-1 Annual reports. Its first report for the six month period prior to reorganization was on the RRB basis. Its second report for the remainder of the year was on the DA basis. The data included in the *Analysis* represent year-end results on the DA basis for the

balance sheet related items and the direct addition of the RRB and the DA results for income statement related items. These figures have been included in the District and U.S. total and due to B&M's size, should not affect the future comparablity of these totals.

2. Delaware and Hudson (D&H): The D&H received a special exception from the ICC to use the RRB method of accounting for 1983. As a result, none of D&H's data is on a depreciation basis. Like the B&M, D&H's results were simply included in the District and U.S. totals.

3. Western Maryland (WM): On May 1, 1983, the Baltimore and Ohio Railroad (B&O) began operating the WM properties. Income and operating statistics prior to May 1, have been placed under WM. For operations subsequent to and including May 1, data are consolidated with the B&O. However, WM's Freight Commodity Statistics (FCS) are data for the first three quarters of 1983. The fourth quarter's FCS data are consolidated with the B&O. Since the WM's results are for a partial year, many of its ratios and other indicators are not comparable to other railroads or previous years.

4. Long Island (LI): During 1983, LI was reclassified as a Class III Railroad for the entire 1983 reporting year.

5. Seaboard System (SBD): SBD is the consolidation of three railroads - The Louisville and Nashville, the Clinchfield, and the Seaboard Coast Line.

Notes and Comments

1. Boston & Maine reported on an RRB basis for the first six months of 1984 and on a DA basis for the final six months of the year (see Accounting and Reporting Changes, p.iii).

2. Delaware & Hudson used the RRB accounting system for 1983.

3. Western Maryland results are for a partial year (see Accounting and Reporting Changes, p.iii).

4. Seaboard System reported this with data included in previous line.

5. Illinois Central Gulf did not report this data in board feet.

6. Lines 366 and 368 were estimated for B&O, B&M, C&O, CNW, DMIR, ICG, MKT, SSW, SP, & WM. Line 366 was estimated for N&W.

7. Data included with Baltimore & Ohio.

8. This data was not included in 1983 R-1.

SOURCE: RRB data are from the fourth quarter RE&I
except NROI and Average Net Investment which
is from the ICC Supplementary Schedule.
DA data are from the R-1

FOOTNOTES: 1/ DA data are the addition of Boston & Maine's half-year results.
First half on RRB, second half on DA.
2/ Delaware and Hudson did not report on a DA basis in 1983.
3/ Does not include Southern Railway Systems Class II and III investment
for end of year RRB investment, and beginning of year DA investment.
